

Obsolesce and Hard to Find

Computer Parts Locating

The massive use of commercial and industrial computer parts in Electronic Systems, leads to Systems that are in the end development phase and already have obsolesce computer parts.

Some of the Systems can be upgraded, but some cannot due to qualification process, closed Operation systems (OS), and for those Systems the manufacture is required to purchase the original parts.

Our Capabilities

- We have the ability to locate obsolesce computer parts, by the part number, and suggest also replacement in case of unavailable part.
- We have resources in the east (Taiwan, South Korea, China, Honk-Kong), Europe (France, UK, Denmark, Czech...) and USA.
- We can provide an engineering solution in case of unavailable part.

Our Advantages

- **Definition** - The customer defines the product, or giving sample part in order that we will define the specific part number.
- **Engineering Activity** – In case that the original part was not found, we can define a substitute part, including verification process.
- **Testing** – We are testing 100% of the parts that we deliver to our customers, including COC.
- **Warranty** – We provide the parts with 12 months standard warranty. We handle our own spare parts to support the warranty period.
- **Flexibility** – We handle each Purchase Order (PO) the same, no matter the size of it.
- **Quick Response** – we will have an answer to your requirements within 2 working days.
